ABOUT ME

Frontend Engineer based in Turin, with a BSc in Computer Science and three and a half years building enterprise web applications in production as a consultant, from banking to infrastructure monitoring on geospatial systems. I work mostly in TypeScript: Angular from version 13 to 20 in production, with Angular Material, PrimeNG and RxJS, and on the backend contained features in NestJS and Node. Today I'm studying React, Next.js, NestJS and MongoDB, which I apply in personal projects, and how to integrate AI agents into my development cycle.

WORK EXPERIENCE

Self-directed study and projects · Independent

Mar 2026 – Present

A deliberate break after Orbyta, to go deeper on the stack and on agentic development.

- React 19 applications with Tailwind CSS 4, Base UI and Motion, built around accessibility: focus management, live regions, keyboard navigation, reduced motion.
- Angular 22 with Signal Forms and signal-based stores, no NgRx.
- Studying how to integrate AI agents into my development cycle, also through Anthropic's courses: planning features, reviewing every change, encoding my conventions as skills and rules; MCP servers.
- Studying Next.js, NestJS and MongoDB, applied in personal projects.
- Constantly testing myself on personal projects, where I apply what I study.

Angular library for a GIS platform

Dec 2024 – Jan 2026

Geospatial application for infrastructure monitoring: an Angular app integrating several libraries, over NestJS microservices behind a central Node gateway. I worked on several nodes of the architecture: the frontend library, the Angular app, a NestJS microservice and the Node gateway.

- Built and maintained the library's components and features, exposed to the app through configuration: vector and raster layers — polygons, multipolygons, lines, points — on a Leaflet map.
- Upgraded the library from Angular 16 to 20, refactoring state and reactivity onto the Signals API.
- From September 2025, knowledge transfer of the library to a new development group and coordination of its work: pairing sessions, reviews of features, of their integration and of their releases.
- Backend features in NestJS, then integrated into the library: endpoints and integrations with GeoServer's APIs. Geoprocessing with GDAL, verified in QGIS.
- Several simultaneously open modals kept consistent with a single application state; multi-tenant configuration with data segregated by access profile.
- Real-time, event-driven sync between the Angular app and an embedded HTML document over the Broadcast Channel API.

Monitoring application for a document accessibility platform

Jan 2026 – Mar 2026

Sole frontend developer, with one backend colleague (Java, Spring) and a project lead. I chose the stack — Angular 20 and PrimeNG — and took the frontend through most of the project in two months.

- Signal-based state management throughout, in place of observable-driven state.
- A design system built on top of PrimeNG, and reusable tables with server-side filtering and pagination.
- Dashboard with counters and domain statistics.
- Frontend authentication and access control to resources.

Angular 20 · Signals · PrimeNG · TypeScript · SCSS

Frontend Developer · Aktive Reply (Reply Group)

Sept 2022 – Dec 2024

Sep 2022 – Jun 2023 as an external consultant through IT Partner Italia.

Policy publishing platform for a banking group Sept 2022 – Jul 2024

Workflow platform through which an Italian banking group publishes its corporate policies and distributes them across the group. Angular 13 and PrimeNG, Agile sprints on JIRA.

- Multi-stage publishing workflows — validation, consultation, acceptance, publication — over policies made of structured data, text and attachment collections.
- Role-based read and write permissions, including users who hold several profiles and roles at once.
- Complex dynamic forms over variable metadata: Reactive Forms, FormArray, custom form controls; admin panel with CRUD and soft deletion.
- Later, monitoring and consultation features for published policies.
- Estimated features against changing requirements and shipped fixes through a deploy pipeline with several environments before production.

Angular 13 · PrimeNG · RxJS · Reactive Forms · TypeScript · JIRA

Investment dashboard for a banking group Jul 2024 – Dec 2024

Tool used by the bank's advisers to help customers open investment portfolios. Angular 16, on in-house frameworks built on top of Angular.

- Frontend features end to end, coordinated with the wider team.

Angular 16 · TypeScript · RxJS

Teaching assistant, Programming I · University of Turin

Oct 2021 – Dec 2021

- Lab sessions: explained exercises and worked solutions, in agreement with the course lecturers.

DIGITAL SKILLS

Frontend	Angular 13 → 22 · TypeScript · SCSS · RxJS · React 19 • · Tailwind CSS 4 · Leaflet · Next.js •
UI libraries	PrimeNG · Angular Material · shadcn/ui · Base UI
Backend & data	NestJS • · Express · PostgreSQL · MongoDB • · Docker •
Tools	Git · Figma · Claude Code

• current focus

EDUCATION AND TRAINING

BSc in Computer Science · University of Turin

Oct 2018 – Jul 2022

107/110 · networks track

- Internal internship: a management application for information sheets, with readers, authors and super users — Angular 13 and TypeScript on the frontend, a REST API in Node and Express on the backend.
- First web applications in third-year courses, in HTML, CSS, JavaScript and jQuery.

Intensive English course · Kaplan International, Toronto

Aug 2019 – Sept 2019

Certificate of completion, intermediate level

Scientific high school diploma · IIS "Luca Pacioli", Sant'Anastasia (NA)

Sept 2013 – Jul 2018

78/100
